

Our FRP one-piece sleeve is designed to leave in place, helping to restore structural integrity to deteriorating piles, giving long-lasting and reliable protection. They are chemically resistant to acids, alkalis and most solvents.

Our sleeves are designed to give resistance to abrasion while adding structural stability and impact resistance when concrete or grout is properly placed in the form.

The SLIP JOINT CLOSURE makes underwater assembly easy for your diver.

We have standard diameters available in 12-36", but we can accommodate custom sizes upon request.

We can produce lengths to your specifications. Since every job is different, you must supply external bracing, injection ports, standoffs and hardware.

We can also accommodate your special requirements such as Ultraviolet Resistance – just let us know what you need.
